

TEST SUMMARY REPORT

Application Under Test: SauceDemo (<https://www.saucedemo.com/>)

Tester: Adedeji Adetoun| Date: 29-June-2026| Login Used: problem_user

1. Scope of Testing

- **In scope:** Inventory page display, product sorting, cart badge behavior, cart page accuracy, and general exploratory testing of the login-to-checkout flow.
- **Out of scope:** Checkout payment processing, backend/API testing, performance/load testing, cross-browser testing.

2. Test Execution Summary

Manual functional testing against the 4 acceptance criteria, plus exploratory testing, using the problem_user accounts on saucedemo.com. The metrics below summarize the final execution status.

Metric	Value
Total Test Cases Executed	15
Passed	9
Failed	6
Pass Rate	60%
Total Defects Logged	6

3. Defects Identified Based on Severity

HIGH SEVERITY

- **BUG-003:** Product Catalog filter/sorting logic fails to execute when "Price (Low to High)" or alphabetical values are chosen.
- **BUG-004:** Cart page "Remove" buttons are completely frozen and fail to drop items or decrease the badge counter state.
- **BUG-006:** Navigation to the Cart page via the header shopping cart button results in a catastrophic blank white screen rendering failure (White Screen of Death).

MEDIUM SEVERITY:

- **BUG_005:** Clicking the title or image links of a product redirects the user to an incorrect product.

LOW SEVERITY:

- **BUG_001:** All products items on the inventory page display an identical image.

5. Risks and Observations

- Multiple UI-rendering defects were concentrated in the problem_user account, suggesting front-end data-binding issues rather than backend problems
- Sorting logic appears unreliable and should be prioritized for a fix, as it directly affects a core user story goal
- The application suffers from systemic rendering, calculation, and input events failures specifically triggered within the problem_user environment profiles.
- Users are structurally blocked from finishing a basic purchasing flow. They cannot review their cart items due to a full page crash, they cannot input their complete names, and the financial calculation system is broken.

6. Overall Quality Assessment and Recommendation

Based on the defects found, the application is NOT ready for release without fixes to Cart functionality. Core browsing is largely stable, but sorting and image-display defects directly violate acceptance criteria AC1 and AC2 and should be treated as release blockers.
