

Test Plan

XYZ Bank Limited - HR Management System

1. Document Overview

This document defines the test strategy, scope, and approach for validating the HR Management System (HRMS) developed for XYZ Bank Limited using the OrangeHRM platform. It is the controlling reference for all testing activities carried out by the 5-person QA team for this capstone project.

Field	Detail
Project	XYZ Bank Limited - HR Management System (HRMS)
Platform	OrangeHRM (opensource-demo.orangehrmlive.com)
Document Owner	Austin (QA Team Lead)
Team Size	5 Testers (including Team Lead)
Version	1.0
Status	Draft

2. Introduction

XYZ Bank Limited is implementing an HR Management System using the OrangeHRM platform to handle staff records, leave administration, time and attendance, recruitment, performance management, and related administrative functions. As the system handles sensitive employee data within a banking environment, correctness, data integrity, and proper access control are critical quality attributes.

This test plan covers a focused subset of the system's 15 available modules — those selected for testing by this team during the capstone cycle.

3. Objectives of Testing

- Verify that all in-scope modules function correctly according to expected behavior observed on the OrangeHRM demo environment.
- Confirm that the single Admin login provides appropriate access to all tested modules.
- Validate data integrity across create, read, update, and delete operations within the selected modules.
- Identify, log, and track defects found during test execution.
- Provide stakeholders with a clear, evidence-based view of system quality for the tested modules.

4. Scope

4.1 All Available System Modules

The OrangeHRM system contains 15 modules in total. The table below lists all modules and clearly identifies which are In Scope and Out of Scope for this testing cycle.

#	Module	Status	Tester Assigned
1	Login	IN SCOPE	Adetoun
2	Dashboard	IN SCOPE	Austin
3	Admin	OUT OF SCOPE	-
4	PIM (Employee Management)	IN SCOPE	Adetoun
5	Leave	OUT OF SCOPE	-
6	Time	OUT OF SCOPE	-
7	Recruitment	IN SCOPE	Austin
8	My Info	IN SCOPE	Salem
9	Performance	IN SCOPE	Salem
10	Directory	OUT OF SCOPE	-
11	Maintenance	OUT OF SCOPE	-
12	Claim	OUT OF SCOPE	-
13	Buzz	OUT OF SCOPE	-
14	User Profile	OUT OF SCOPE	-
15	Logout	IN SCOPE	Adetoun

4.2 In Scope - Selected Modules (7 of 15)

- Login
- Dashboard
- PIM (Employee Management)
- My Info
- Performance
- Recruitment
- Logout

4.3 Out of Scope - Remaining Modules (8 of 15)

- Admin

- Leave
- Time
- Directory
- Maintenance
- Claim
- Buzz
- User Profile

4.4 Out of Scope - Testing Types

In addition to the untested modules above, the following types of testing are explicitly out of scope for this project cycle:

- **Multi-role authentication testing** - Not applicable, as only a single Admin login is available in the demo environment. Separate login flows for other user types (e.g., Employee, HR Staff) do not exist in the observed system.
- **Third-party payroll processor integration** - Any integration between the HRMS and external payroll systems is assumed to be mocked or stubbed for this project. Integration-level testing is not in scope.
- **Load and performance testing** - No stress, volume, or performance benchmarking will be conducted. Basic responsiveness of the application during normal use will be noted where obviously poor, but formal performance testing is out of scope.
- **Mobile application testing** - The OrangeHRM system is being tested as a web-based application on desktop browsers only. Mobile browsers and any native mobile app versions are out of scope.

4.4 Scope Note: Single Login Model

The OrangeHRM demo environment provides only one login entry point (Admin). There is no separate login flow for other user types. All access-control testing is therefore conducted by verifying permissions and module visibility within the application after login, rather than testing separate authentication flows per user role.

5. Test Approach

Manual functional testing will be the primary method, supplemented by negative/boundary testing and basic usability observation.

Test Type	Purpose
Functional Testing	Confirm each in-scope module behaves as expected - correct data is saved, displayed, and processed.
Negative/Boundary Testing	Confirm the system handles invalid input, missing mandatory fields, and edge cases gracefully (e.g., duplicate emails, numeric characters in name fields, file size limits).

Access Testing	Confirm the single Admin login provides appropriate access to all 7 tested modules without errors.
Usability Testing	Confirm core workflows are intuitive and UI elements (buttons, icons, dropdowns) behave as expected.

6. Test Environment

Item	Detail
Application	OrangeHRM Demo
URL	https://opensource-demo.orangehrmlive.com
Environment Type	Publicly available demo environment
Browsers	Google Chrome (latest)
Test Data	Synthetic/demo data available in the OrangeHRM demo; no real employee data used
Login Access	Single Admin login account (username: Admin, password: admin123)

7. Roles & Responsibilities

The team consists of 5 members. Each tester owns their assigned module(s) end-to-end; test case design, execution, and defect logging.

Tester	Role	Modules Assigned
Austin	QA Team Lead	Recruitment, Dashboard, plus consolidation of all results and Stakeholder Summary
Adetoun	Test Engineer	Login, PIM (Employee Management), Logout
Salem	Test Engineer	Performance, My Info
Member 4	Test Engineer	TBD
Member 5	Test Engineer	TBD

8. Entry and Exit Criteria

8.1 Entry Criteria

- This test plan has been reviewed and agreed upon by the team.
- Test case templates have been finalized and distributed to all testers.
- The OrangeHRM demo environment is accessible and the Admin login is confirmed working.

8.2 Exit Criteria

- All planned test cases across the 7 in-scope modules have been executed.
- No Critical or High severity defects remain open and unresolved.
- Defect Log is complete and all entries are reviewed.
- Stakeholder Summary Report has been prepared and reviewed by the Team Lead.

9. Deliverables

1. Test Plan (this document)
2. 40 Test Cases (covering all 7 in-scope modules)
3. Defect Log (logging all issues found during execution)
4. Summarized Bug Report for Stakeholders

10. Risks and Assumptions

Risk / Assumption	Mitigation
Only a single Admin login is available; multi-role login behavior cannot be directly tested.	Permissions and role-based visibility will be tested via in-app module behavior rather than separate login flows.
The OrangeHRM demo environment is shared and public; data may change between test sessions.	Testers should document the exact state of test data used at execution time in the Actual Result column.
8 modules are out of scope for this cycle, leaving gaps in overall system coverage.	Out-of-scope modules are clearly documented; stakeholders are made aware of what has and has not been tested.
No automated testing tools are in scope for this project.	All testing is performed manually using structured test case templates.

11. Schedule

Phase	Activity	Owner	Duration
1	Finalize test plan and share with team	Austin (Lead)	Day 1 - 2
2	Write and review test cases per module	All testers	Day 3 - 5
3	Execute test cases and log defects	All testers	Day 6
4	Consolidate results and write Stakeholder Summary	Austin (Lead)	Day 7
5	Final review and submission	All testers	Day 8

12. Approval

Prepared By: QA team Lead - Austin

Reviewed By: Team Members – Adetoun & Salem
